

# Kaden Bilyeu

kadenbilyeu@proton.me | 720-298-8977 | <https://www.linkedin.com/in/kadenbilyeu/> | <https://github.com/Bikatr7> | <https://kadenbilyeu.com>

Computer science student at UCCS focusing on incorporating AI, LLMs, data science, and NER/NLP into software for real-world applications.

## Education

**Bachelor of Science in Computer Science, University of Colorado Colorado Springs (UCCS), (Expected May 2026)**

## Skills

- **Programming Languages:** Python, Java, C, R, C++, JavaScript, Typescript, HTML, CSS, SQL
- **Database Management:** MySQL, Oracle SQL, PL/SQL, SQLite, Data Backup and Recovery, Database Security
- **Technologies & Frameworks:** Git, OpenAI API, mysql-connector-python, DeepL API, discord.py, Gradio, SpaCy, Pillow, React, Docker, FastAPI, Flask, Vite, Dash, Plotly, Fly.io, NetworkX, NumPy, Pandas, Scikit-learn
- **Methods:** Agile software development, OOP, Debugging, UI/UX, Asynchronous design, CI/CD, API Integration

## Projects

**Full Stack Company Website (Kakusui LLC) (<https://kakusui.org>) (April 2024 - Present)**

- Developed a FastAPI backend with multiple endpoints, deployed to a remote cloud hosting service.
- Designed a scalable solution that adapts to new AI models, ensuring continuous improvement of the translation services offered.
- Created a React and Vite frontend that interacts with the backend to provide an optimal visitor experience.
- Delivered a cost-effective website with hosting costs under 15 cents per month by efficiently using hosting services.
- Implemented endpoint security, rate-limit protection, and abuse prevention methods to enhance security.

**Japanese-English Preprocessor and Translator (Kudasai) (<https://huggingface.co/spaces/Bikatr7/Kudasai>) (Jan 2023 - Present)**

- Integrated ChatGPT, Gemini, Anthropic, and DeepL APIs with a WebGUI using Gradio, leveraging SpaCy for NER/NLP.
- Improved translation speed by 98% by automating and revolutionizing an existing manual process.
- Managed iterative design changes and client requirements over 2 years, resulting in a robust, user-friendly application.
- Actively developed and currently in use by other parties.
- Investigated and resolved bugs during live hosting on GitHub.

## Work Experience

**(Network Goods Institute), Software Engineering Intern, (07/2024 - Present)**

- Developed a Dash-powered Python web GUI integrating NetworkX, Plotly, and other data visualization techniques to demonstrate an index-wallet-powered economy simulation.
- Engaged in weekly meetings with superiors, actively iterating on the project based on feedback, and receiving further instructions to refine the simulation.

**(Outlier.ai), AI Training, (Contract) (06/2024 - Present)**

- Contributed to the refinement of AI models, focusing on enhancing response accuracy and efficiency by properly following advanced training techniques and iterative feedback loops with Reinforcement Learning from Human Feedback.
- Developed, reviewed, and optimized AI responses to ensure high relevance, precision, and accuracy.

**(UCCS), Teaching Assistant, (01/2024 - Present)**

- Assisted students in mastering R and data analysis concepts. Enhancing their programming efficiency and overall code quality.
- Provided one-on-one support to help students understand statistical methods and their applications in real-world data analysis.

## Activities

- **Association of Computer Machinery (ACM) Member (10/2023 - Present)**
- **Finalist in Backdrop Build V3, a 4-week online program focused on building and launching projects in frontier tech areas.**
