Computer science student at UCCS focusing on incorporating AI/ML, LLMs, data science, and NER/NLP into software for real-world applications.

Education

Bachelor of Science in Computer Science, University of Colorado Colorado Springs UCCS, (Expected May 2026)

Work Experience

OSCorp, AI/ML Intern, (09/24 - Present)

- Contributed to the development of cutting-edge AI/ML tools for space defense, focusing on enhancing autonomy and improving real-time decision-making capabilities for national security applications
- Utilized extensive space data to develop new algorithms that enhance sensor search and reacquisition capabilities, advancing U.S. space domain awareness efforts.

Network Goods Institute, Software Engineering Intern, (07/2024 - 09/24)

- Developed a Dash-powered Python web GUI integrating NetworkX, Plotly, and other data visualization and manipulation techniques to demonstrate an index-wallet-powered economy simulation.
- Engaged in weekly meetings with superiors, actively iterating on the project based on feedback, and receiving further instructions to refine the simulation.

UCCS, Teaching Assistant, (01/2024 - Present)

- Assisted students in mastering R, data analysis concepts, C, and the Agile programming methodology. Enhancing their programming efficiency and overall code quality.
- Provided one-on-one support to help students understand statistical methods and their applications in real-world data analysis.

Skills

- **Programming Languages:** Python, Java, C, R, C++, JavaScript, Typescript, HTML, CSS, SQL
- **Database Management:** MySQL, Oracle SQL, PL/SQL, SQLite, Data Backup and Recovery, Database Security
- **Technologies & Frameworks:** Git, OpenAI API, mysql-connector-python, DeepL API, discord.py, Gradio, SpaCy, Pillow, React, Docker, FastAPI, Flask, Vite, Dash, Plotly, Fly.io, NetworkX, NumPy, Pandas, Scikit-learn, Linux, Unix
- **Methods:** Agile software development, OOP, Debugging, UI/UX, Asynchronous design, CI/CD, API Integration
- **Soft Skills:** Communication, Problem-Solving, Teamwork, Collaboration, Adaptability, Time-Management, Leadership

Projects

Full Stack Company Website (Kakusui LLC) (<https://kakusui.org>) (April 2024 - Present)

- Developed a FastAPI backend with multiple endpoints, deployed to a remote cloud hosting service
- Designed a scalable solution that adapts to new AI models, ensuring continuous improvement of the translation services offered
- Created a React and Vite frontend that interacts with the backend to provide an optimal visitor experience
- Delivered a cost-effective website with hosting costs under 15 cents per month by efficiently using hosting services
- Implemented endpoint security, rate-limit protection, and abuse prevention methods to enhance security

Japanese-English Preprocessor and Translator (Kudasai) (<https://huggingface.co/spaces/Bikatr7/Kudasai>) (Jan 2023 - Present)

- Integrated ChatGPT, Gemini, Anthropic, and DeepL APIs with a WebGUI using Gradio, leveraging SpaCy for NER/NLP
- Improved translation speed by 98% by automating and revolutionizing an existing manual process
- Managed iterative design changes and client requirements over 2 years, resulting in a robust, user-friendly application
- Actively developed a robust application currently in use by other parties, while investigating and resolving bugs during live hosting

Activities

- **Association of Computing Machinery (ACM) Officer, Secretary-Treasurer (10/2023 - Present)**
- **Finalist in Backdrop Build V3, a 4-week online program focused on building and launching projects in frontier tech areas.**
